SUMMARY

Software developer with experience in Python, C#, and full-stack application development. Skilled in designing backend logic, building user interfaces, and integrating databases such as SQL Server. Experienced in developing and maintaining software systems as well as mentoring learners in programming fundamentals. Seeking a software engineering role to contribute to scalable and efficient applications.

EDUCATION

Hanoi University of Industry 2023 - 2026

- Master of Information System
- GPA: Excellent

Hanoi University of Industry 2019 - 2023

- Bachelor of Science in Computer Science
- GPA: Good - 3.52

PROFESSIONAL EXPERIENCE

Freelance Developer Sep 2024 - Present
Software Engineer *Ha Noi*

Description: Freelance developer and mentor specializing in Python and software development, focused on delivering practical, project-based learning and industry-relevant skills.

Technologies: Python3, Beautiful Soup, Selenium, Computer Vision, Machine Learning, FastAPI, MongoDB, Git, etc.

Responsibilities

- Created structured learning paths and coding exercises, reducing onboarding time for new learners by 30%.
- Mentored 5+ learners (beginner to advanced) in Python, algorithms, and software development, achieving 80% project completion rate.
- Designed and delivered 5+ hands-on projects (e.g., classification models, web applications), improving learners' practical development skills.
- Conducted code reviews and provided debugging support, enhancing code quality and problem-solving capabilities.

Rikai Mind Jan 2024 - Sep 2024
Software Engineer *Ha Noi*

Description: Rebuilt a tutoring management application for a Japanese education center from a legacy system using WPF, C#, and SQL Server. Applied the MVVM architecture to improve maintainability, performance, and scalability.

Technologies: C#, .NET, WPF (MVVM), SQL Server, Excel, Git.

Responsibilities

- Applied MVVM architecture in WPF applications to improve code maintainability and separation of concerns.
- Designed and documented data models and system workflows for 5+ UX/UI modules.

- Developed, tested, and debugged application features, ensuring reliability and high-quality user experience.
- Refactored and migrated Excel-based business logic into application code to align with client software requirements and improve maintainability.

Vietnam Cybersecurity Emergency Response Team / Coordination Center (VNCERT) Apr 2023 - Sep 2023
Python Developer Internship *Ha Noi*

Description: Python intern focusing on Python programming and building user interfaces and application logic for online learning platforms.

Technologies: Python3, NodeJS, UI Development, Git.

Responsibilities

- Applied Python programming fundamentals to support development tasks and improve coding practices.
- Developed and implemented user interface components for online course lecture screens.
- Handled application logic to ensure smooth functionality and user experience across learning modules.

AHT Tech Jan 2023 - Apr 2023
Python Developer Internship *Ha Noi*

PROJECTS

License Plate Recognition using Neural Network | *Python, OpenCV, Scikit-learn, Django, CNN*

- Developed an end-to-end license plate recognition system using neural networks for image-based detection and character classification.
- Implemented data preprocessing pipelines with OpenCV and Scikit-learn, including noise reduction and handling incomplete or inconsistent image data to improve model performance.
- Designed, trained, and optimized machine learning models to perform accurate license plate recognition from input images.
- Built and deployed a Django-based web application to integrate the trained model, enabling real-time inference through a user-friendly interface.

TECHNICAL SKILLS

Languages: Python, C#, SQL
Frameworks/Platforms: FastAPI, .NET, WPF, OpenCV, Scikit-learn, Tensorflow, PyTorch, HuggingFace, Streamlit
Database Management Systems: MS SQL Server, MongoDB
